

# Spectra-trait PLSR example using leaf-level spectra and leaf nitrogen content (Narea, g/m<sup>2</sup>) data from 36 species growing in Rosa rugosa invaded coastal grassland communities in Belgium

Shawn P. Serbin, Julien Lamour, & Jeremiah Anderson

## Overview

This is an R Markdown Notebook to illustrate how to retrieve a dataset from the EcoSIS spectral database, choose the “optimal” number of pls components, and fit a pls model for leaf nitrogen content (Narea, g/m<sup>2</sup>)

## Getting Started

### Load libraries

```
list.of.packages <- c("pls", "dplyr", "here", "plotrix", "ggplot2", "gridExtra", "spectratrait")
invisible(lapply(list.of.packages, library, character.only = TRUE))
```

```
